The power behind
your mission

What is confined space?

An area which is partially or fully enclosed, where there is a risk or serious injury or death from dangerous conditions.

- Lack of oxygen
- Release of toxic gases
- Flammable

Planning & management

We always work with the philosophy of **NO COMPROMISE TO SAFETY** to reduce the risk of incident or personnel injury to an absolute minimum.

Specialist teams

All of our team members are recruited from the emergency services to ensure that they are trained and practiced in working in confined spaces and dealing with trauma.

- Specialist Training • Face Mask Fit Testing

NO Compromise to Safety!

Prevention is always better than cure! It is always preferable to prevent Confined Space accidents as opposed to addressing them afterwards. We offer a totally independent viewpoint based on years of experience. Depending on the Confined Space, local Emergency Services do not always have the necessary specialist equipment available to respond quickly. If an accident does occur on site, time is of the essence. We have the expertise and equipment necessary to manage the incident promptly, efficiently and with minimal delay.

Our specialist teams have many years of experience. Many have been recruited direct from the Emergency Services. All personnel are trained and experienced in Confined Spaces. Our Rescue Teams also have extensive experience of working with trauma casualties.

When planning and managing Confined Spaces we always work with the philosophy of NO COMPROMISE TO SAFETY. No one can provide a 100% guarantee of safety when working in Confined Spaces. However, with careful planning of personnel and resource we can reduce the risk of incident or personnel injury to an absolute minimum.

Life is precious! We know most Confined Space Injuries and fatalities are completely avoidable. Trust Johnson Controls Fire & Integrated Solutions to help manage your Confined Spaces!

Over 10 years practical, hands-on experience

Our services are utilised by a wide range of industries including, Petrochemical (onshore and offshore), Utilities, Pharmaceutical, plus Renewable and Environmental Specialists.
